I am writing to express my strong interest in the Projektmanager:in (m/w/d) in Voll- oder Teilzeit role at Medienagentur Y OHG. With 4 years of web development, more than 1 year of drone/AI work, and 2 years of cybersecurity-focused experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

Through hands-on project development, the strongest overlap I see is around software engineering. Those areas match the way I approach engineering work: understand the role's actual requirements, choose the relevant tools, and build systems that remain clear, reliable, and maintainable.

The responsibilities in the job description connect most closely with my experience around reliability, maintainability, and real-world implementation. This gives me a concrete basis for contributing to similar responsibilities without overstating skills that are not part of my profile or not requested in the role. For a mid-level role, I would focus on implementation quality, ownership of assigned work, and reliable delivery against product and engineering requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
