I am writing to express my strong interest in the Software Engineer (Frontend) - Intern role at Heidi Systems. With 4 years of professional full-stack web development experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

I enjoy environments where rapid iteration, ownership, and practical problem-solving are valued.

Through hands-on project development, I can connect this role most directly to TypeScript, CSS, Tailwind CSS, REST APIs. My focus is on practical implementation, clean architecture, and careful execution around the exact technologies and responsibilities present in the job description.

A relevant example is AI Powered Financial App, which connects to the role through performance, scalability, deployment, and maintainable delivery. It reflects how I move from requirements to working systems while keeping performance, reliability, and maintainability visible throughout the work. At this level, I would emphasize learning quickly, applying my university foundation, and contributing through hands-on development and project work.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
