I am writing to express my strong interest in the Werkstudent Social Media Kommunikation & PR (m/w/d) role at rlvnt GmbH. With more than 1 year of drone, AI, and autonomous systems experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

Through hands-on project development, I have worked with drone, UAV, and robotics systems in contexts that relate directly to the requirements described in this role. I focus on using the technologies that matter for the job rather than listing every tool I know, so my application is centered on the strongest overlap with your description.

A relevant example is AI Powered Financial App, which connects to the role through reliability, maintainability, and real-world implementation. I would bring that same attention to supported requirements, implementation quality, and realistic delivery constraints in this position. For a mid-level role, I would focus on implementation quality, ownership of assigned work, and reliable delivery against product and engineering requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
