I am writing to express my strong interest in the Entry Level Administrative Assistant role at ReLytics Hire. With more than 1 year of applied AI and machine learning experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

A growing engineering environment appeals to me because it rewards clear execution, adaptability, and thoughtful technical decisions.

Through research and development work, I have worked with AI and machine learning engineering in contexts that relate directly to the requirements described in this role. I focus on using the technologies that matter for the job rather than listing every tool I know, so my application is centered on the strongest overlap with your description.

A relevant example is Decentralized Coordination in Secure Autonomous Drone Swarms, which connects to the role through reliability, maintainability, and real-world implementation. I would bring that same attention to supported requirements, implementation quality, and realistic delivery constraints in this position. At this level, I would emphasize learning quickly, applying my university foundation, and contributing through hands-on development and project work.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
