I am writing to express my strong interest in the Project Manager role at Queensland Government. With 2 years of focused cybersecurity and secure communications experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

I value customer-focused engineering where technical decisions stay connected to practical user and business needs.

Through hands-on project development, I can connect this role most directly to cybersecurity and secure systems. My focus is on practical implementation, clean architecture, and careful execution around the exact technologies and responsibilities present in the job description.

A relevant example is AI Powered Financial App, which connects to the role through reliability, maintainability, and real-world implementation. It reflects how I move from requirements to working systems while keeping performance, reliability, and maintainability visible throughout the work. For a mid-level role, I would focus on implementation quality, ownership of assigned work, and reliable delivery against product and engineering requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
