I am writing to express my strong interest in the Sales Assistant role at Endureed by Global Innovation. With more than 1 year of applied AI and machine learning experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

I enjoy environments where rapid iteration, ownership, and practical problem-solving are valued.

Through hands-on project development, the strongest overlap I see is around AI and machine learning engineering. Those areas match the way I approach engineering work: understand the role's actual requirements, choose the relevant tools, and build systems that remain clear, reliable, and maintainable.

A relevant example is AI Powered Financial App, which connects to the role through reliability, maintainability, and real-world implementation. This gives me a concrete basis for contributing to similar responsibilities without overstating skills that are not part of my profile or not requested in the role. For a director-level context, I can speak to systems thinking, automation opportunities, process improvement, and business impact, while avoiding unsupported claims about people-management experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
