I am writing to express my strong interest in the Frontend Developer role at Quinncia Inc. With 4 years of professional full-stack web development experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is contributing to a team applying AI solutions to real business and engineering problems.

I enjoy environments where rapid iteration, ownership, and practical problem-solving are valued.

In my professional experience, I have worked with Next.js, JavaScript, TypeScript, CSS in contexts that relate directly to the requirements described in this role. I focus on using the technologies that matter for the job rather than listing every tool I know, so my application is centered on the strongest overlap with your description.

A relevant example is Multivendor E-commerce Management Platform, which connects to the role through REST APIs, Docker. I would bring that same attention to supported requirements, implementation quality, and realistic delivery constraints in this position. For a lead-oriented role, I would contribute through project ownership, clear technical communication, and cross-team collaboration while staying precise about my hands-on engineering background.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
