I am writing to express my strong interest in the Tech Lead Full-Stack Rails Engineer role at Mitre Media. With 4 years of professional full-stack web development experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is the company's focus on modern financial technology and scalable digital products.

I am comfortable collaborating across distributed teams and communicating clearly in asynchronous environments.

In my professional experience, the strongest overlap I see is around React, JavaScript, HTML, CSS. Those areas match the way I approach engineering work: understand the role's actual requirements, choose the relevant tools, and build systems that remain clear, reliable, and maintainable.

A relevant example is Multivendor E-commerce Management Platform, which connects to the role through Tailwind CSS, REST APIs, MySQL. This gives me a concrete basis for contributing to similar responsibilities without overstating skills that are not part of my profile or not requested in the role. For a senior-level role, I would focus on sound architecture, careful technical decisions, scalability, and sharing practical context with teammates without overstating formal leadership experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
