I am writing to express my strong interest in the Office Assistant role at Coalition Technologies. With 4 years of professional backend and full-stack web development experience, I bring a combination of production-grade development skill and research-driven engineering judgment.

One area that particularly interests me is the company's focus on modern financial technology and scalable digital products.

I value customer-focused engineering where technical decisions stay connected to practical user and business needs.

Through hands-on project development, I can connect this role most directly to backend software engineering. My focus is on practical implementation, clean architecture, and careful execution around the exact technologies and responsibilities present in the job description.

A relevant example is AI Powered Financial App, which connects to the role through reliability, maintainability, and real-world implementation. It reflects how I move from requirements to working systems while keeping performance, reliability, and maintainability visible throughout the work. For a mid-level role, I would focus on implementation quality, ownership of assigned work, and reliable delivery against product and engineering requirements.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

Sincerely,

Md Shahanur Islam Shagor
