I am writing to apply for the FP&A Analyst position at CapitexAI. While my professional background is in software engineering, I have consistently worked on data-intensive projects that require strong analytical thinking, attention to detail, and the ability to transform complex information into clear, actionable insights.

Through my work on an AI-powered financial application, I developed APIs using Express, TypeScript, and MongoDB, integrated OpenAI for intelligent data processing, and automated the generation of PDF term sheets from Google Sheets data. This project required me to handle financial data flows, ensure data integrity, and build systems that support decision-making, skills that directly transfer to financial planning and analysis.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am confident that my analytical mindset, experience with data automation, and ability to build reliable systems would allow me to contribute meaningfully to the FP&A team at CapitexAI. I have attached my CV for your review and would welcome the opportunity to discuss how my background aligns with your needs.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
