I am writing to apply for the DevSecOps Engineer position at TrueML. Your mission to create better financial experiences for distressed borrowers through machine learning and digital-first engagement is both meaningful and technically compelling. I am particularly drawn to the challenge of embedding security into the SDLC at scale while maintaining the speed and agility that modern engineering teams require.

My technical foundation is built on CI/CD automation, cloud infrastructure, and application security. I have practical experience with GitHub Actions, Docker, Kubernetes, and AWS services including EC2, S3, and IAM concepts. I am comfortable scripting in JavaScript and Python, and I understand the importance of shift-left security practices, automated compliance checks, and runtime protections in containerized and serverless environments.

One area that aligns closely with this role is my work on securing full-stack applications through authentication, role-based access control, and secure API integrations. In previous projects, I deployed applications on Linux servers using Nginx and Docker, implemented CI/CD pipelines, and managed cloud resources on AWS and Digital Ocean. I have also worked on real-time monitoring systems that track system health and latency, giving me practical exposure to observability and infrastructure reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and welcome the opportunity to discuss how my background in DevSecOps, cloud security, and automation can contribute to TrueML’s engineering team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
