I am writing to apply for the Senior Product Manager role at Distru. Your work building the #1 ERP for the cannabis industry and your focus on AI-native product features like the AI Order Agent stand out. The opportunity to own a meaningful piece of a roadmap where AI agents integrate into user workflows is exactly the kind of challenge I am looking for.

My technical background is rooted in full-stack development and AI engineering. I have built production systems using Laravel, Next.js, Node.js, and React, and I have integrated AI capabilities into real products. For example, I developed an AI-powered financial application where I built AI assistants using OpenAI's latest models, trained on custom datasets, and implemented voice-to-text processing via AWS Transcribe. This required understanding both the technical architecture and the user experience design of AI features.

What draws me to this role is the emphasis on designing how AI suggests, automates, and stays silent. In my projects, I have made similar decisions: determining when automation adds real value versus when human judgment must remain in control. I have shipped features where AI earns its place in the product rather than being bolted on as an afterthought.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the chance to discuss how my background in building AI-integrated products and my technical fluency can contribute to Distru's next phase of growth.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
