I am writing to apply for the Research Analyst position at Gritter Francona, supporting the IT-Non-IT Workgroup within the Veterans Health Administration. This role aligns with my background in software engineering and my experience conducting research, analyzing data, and preparing reports to support strategic decisions.

Through my professional experience, I have developed strong analytical and problem-solving abilities. I have worked on projects that required collecting and processing data from multiple sources, identifying patterns, and presenting findings in a clear, actionable format. My technical background allows me to approach research tasks systematically and translate complex information into insights that support decision-making.

One area that particularly interests me is the opportunity to support both IT and non-IT initiatives within VHA. In my previous roles, I have collaborated with cross-functional teams, documented project requirements, and maintained detailed records of research findings and meeting minutes. I am comfortable working with stakeholders at different levels and ensuring that documentation remains accessible and traceable.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my research and analytical skills can contribute to the success of ITW initiatives at VHA. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
