I am writing to apply for the Junior Business & Data Analyst position at Upgrade, Inc. Your mission to deliver affordable and responsible financial products that improve customers' financial well-being is something I find genuinely compelling, and I would welcome the opportunity to contribute to a team that has already helped millions of people access better credit.

Through my software engineering background, I have developed strong analytical skills working with structured datasets. I regularly use SQL across MySQL and PostgreSQL, writing queries that involve joins, CTEs, and window functions to extract insights and support decision-making. My experience includes building reports, tracking KPIs, and performing data quality checks to ensure accuracy and reliability.

In my professional experience as a Web Developer, I built and maintained dashboards that required clear data visualizations and regular reporting. I documented query logic and data definitions to support validation and reconciliation efforts. I also worked closely with stakeholders to gather requirements, translate data outputs into plain-language summaries, and support executive reporting. I use AI tools like ChatGPT as a practical part of my workflow for analysis and problem-solving.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. Thank you for considering my application.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
