I am writing to apply for the Communications Associate position at Discord. Discord's role in shaping how gaming communities connect and communicate is something I find genuinely compelling, and I would welcome the opportunity to support the team behind that mission.

My background is in software engineering, where I have spent the last several years working across full-stack development, API design, and project delivery. While this is not a traditional communications role, the skills I have built around coordination, documentation, and cross-functional collaboration are directly relevant to the responsibilities outlined in this position.

In my professional experience, I have worked closely with product teams, stakeholders, and external partners to manage complex workflows, maintain alignment across multiple projects, and ensure that timelines and deliverables are met without friction. I have developed a practical approach to bringing clarity to ambiguous situations and keeping teams informed and organized as priorities shift.

One area that particularly interests me is the operational side of communications. I enjoy building systems and processes that make collaboration smoother, whether that means organizing internal resources, tracking priorities, or coordinating between different groups. I am comfortable working in fast-moving environments where good judgment and clear communication are essential.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments. I have attached my CV for your review and would welcome the chance to discuss how I can contribute to Discord's communications team.

Sincerely,

Md Shahanur Islam Shagor
