I am writing to apply for the Pharmacology Research Specialist position at STEM Sync AI. My background in software engineering, AI systems, and research-driven development aligns well with the analytical and systematic nature of this role.

Through my research and project work, I have developed strong skills in data processing, model evaluation, and automation. I built a real-time object detection system using YOLOv8n and Python that operates fully offline on low-cost hardware, requiring careful optimization of inference speed and accuracy. This kind of systematic testing and iterative refinement is directly applicable to research environments where precision and reproducibility matter.

One area that particularly interests me is the intersection of AI and biology. While my direct experience is in autonomous systems and computer vision, the underlying principles of data analysis, model validation, and pipeline automation transfer naturally to pharmacology research. I am comfortable working with large datasets, writing clean Python code for analysis, and documenting workflows clearly.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your research initiatives.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
