I am writing to apply for the Graphic Designer position at The Fountain Group. Your focus on solving complex marketing problems through concept, design, and execution aligns with my background in building user-focused digital experiences.

My professional experience includes designing and developing responsive web interfaces using Figma, Tailwind CSS, and modern JavaScript frameworks. I have worked on projects that required translating stakeholder requirements into clean, functional designs for both web and mobile platforms. Figma has been a core part of my workflow for creating layouts, prototyping interactions, and collaborating with development teams.

In addition to design tools, I have working knowledge of AI workflows and automation. I have integrated AI APIs into applications and understand how tools like Google Gemini can enhance creative processes. This technical perspective allows me to bridge design and engineering effectively, which is valuable when designing for tech industry clients.

In my previous role as a Web Developer, I delivered full-stack applications that required strong attention to visual detail, consistent design systems, and responsive layouts. I am comfortable working across teams and adapting to different project needs, whether designing email campaigns, webpages, or presentation materials.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV and portfolio for your review. Thank you for considering my application.

Sincerely,

Md Shahanur Islam Shagor
