I am writing to apply for the Supply Chain Management position at Tava Partners. While my professional experience is rooted in software engineering and full-stack development, I bring strong analytical thinking, process documentation skills, and cross-functional coordination abilities that are directly relevant to supply chain planning roles.

Through my work as a Web Developer at Explo-IT and DataSoft LTD, I have designed and maintained complex systems involving MySQL and PostgreSQL databases, built RESTful APIs, and implemented role-based access control. These projects required careful documentation of business rules, assumptions, and operating procedures, as well as close collaboration with stakeholders across engineering, quality, and operations teams.

One area that particularly interests me is the emphasis on documenting planning assumptions and developing training materials for future onboarding. In my previous roles, I regularly created technical documentation and knowledge transfer resources to support team members and streamline project handoffs. I also have experience supporting transition efforts for offshore teams, ensuring continuity and clarity during handover periods.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in systems thinking, process improvement, and cross-team coordination can contribute to Tava Partners' supply chain operations. Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
