I am writing to apply for the Lead Specialist role at Autoliv. Your focus on vehicle safety and quality-driven engineering is something I respect, and I am interested in contributing to a team that prioritizes reliability and precision.

My background is in full-stack development and system engineering. Over the past four years, I have built and deployed web applications using Laravel, Next.js, Node.js, and React, with a strong emphasis on secure authentication, role-based access control, and database optimization. I also have hands-on experience with Docker, Linux server management, and CI/CD pipelines, which I have used to maintain production-grade systems.

In my professional experience at Explo-IT, I designed scalable applications, integrated RESTful APIs, and implemented real-time features using WebSockets. I also worked on performance tuning through query optimization and caching strategies. These responsibilities required careful attention to detail and a focus on delivering stable, maintainable solutions.

One project that reflects my approach is a real-time server health monitoring dashboard I built using Node.js, Socket.IO, Python, and Docker. The system streams live metrics to the browser and supports role-based access, demonstrating my ability to build tools that support operational visibility and reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my skills could contribute to Autoliv’s mission of saving more lives.

Sincerely,

Md Shahanur Islam Shagor
