I am writing to apply for the Financial Data Application Specialist Corporate role at AlphaSense. Your platform's mission to deliver AI-driven market intelligence to over 6,000 enterprise customers, including a majority of the S&P 500, is impressive. The opportunity to work at the intersection of technical implementation, customer success, and product strategy is exactly the kind of challenge I am looking for.

Through my professional experience, I have built full-stack applications with a strong focus on AI integration and financial data processing. One project involved developing an AI-powered financial mobile application where I designed the entire API using Express, TypeScript, and MongoDB. The system integrated OpenAI assistants trained on custom datasets, converted voice messages to text using AWS Transcribe, and automatically generated PDF term sheets from Google Sheets data. This required close collaboration with stakeholders to understand business workflows and translate them into technical solutions.

What stands out to me about this role is the entrepreneurial nature of the team. You are building a new function at AlphaSense, and the expectation is to use client discussions to shape both go-to-market and product strategies. In my previous work, I have consistently operated in environments where feedback loops between clients and engineering were essential. I am comfortable communicating with technical and non-technical audiences and translating product needs into actionable implementation plans.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI-powered financial applications and full-stack development can contribute to AlphaSense's growing financial data products team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
