I am writing to express my interest in the TEST Australia position at Faculty. Your focus on human-centric AI and responsible deployment resonates with my own approach to building intelligent systems that deliver measurable real-world impact.

Through research and development work, I have built AI-powered applications that combine modern machine learning models with practical software engineering. One area that particularly interests me is deploying AI systems that work reliably in production environments, not just in controlled settings. My work on the Wireless Vision-Aid for the Blind involved building a real-time object detection pipeline using YOLOv8n on edge hardware, processing video streams locally with ultra-low latency and providing multilingual audio feedback. This project required integrating computer vision, embedded systems, and real-time communication into a single offline-capable system.

In previous work, I developed an AI-powered financial application that used OpenAI's latest models for intelligent assistance, integrated AWS Transcribe for voice-to-text conversion, and automated PDF generation and email delivery through AWS SES. I also built an AI-powered real estate platform that combined Replicate API for image processing with role-based authentication, subscription plans, and Stripe payment integration. These projects required designing scalable API architectures, managing cloud infrastructure, and ensuring reliable performance under real usage conditions.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to Faculty's mission of building responsible AI that moves the needle.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
