I am writing to apply for the Design Engineer role at USB Club. The idea of building a sneaker net for artists, DJs, and researchers is genuinely interesting, and I appreciate the focus on both product design and engineering.

My background is in full-stack web development with a strong emphasis on Next.js, TypeScript, and PostgreSQL. Your engineering stack aligns well with what I work with daily, and I am comfortable owning features from concept to deployment without heavy oversight. I also have experience with Laravel, React, and Node.js, and I have deployed applications on AWS and Linux servers.

One area that particularly interests me is the planned migration from Vue to Next.js. I have built multiple production applications using Next.js with TypeScript, including a travel agency platform that supports multi-language and multi-currency features, and a personal finance dashboard with real-time updates and role-based access. I am confident I can contribute to that migration and help shape the web experience.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to USB Club’s next chapter.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
