I am writing to apply for the Entwickler fˆ…r KI- & Automatisierungen position at Smarte Prozesse GmbH. The focus on building intelligent automation solutions and digital workflows aligns well with my background in software engineering and AI-driven development.

Through hands-on project development, I have built AI-powered applications that combine Python, API integration, and frontend technologies. One example is an AI-powered financial app where I developed the backend using Express, TypeScript, OpenAI, and AWS. The system included AI assistants trained on custom datasets, voice-to-text processing via AWS Transcribe, and automated PDF generation from Google Sheets data. This experience directly applies to developing automation solutions and connecting external APIs and databases.

I also have professional experience as a Web Developer where I built scalable web applications using Laravel and Next.js, integrated RESTful APIs, implemented authentication and role-based access control, and deployed systems on Linux servers with Docker and Nginx. I am comfortable working with frontend technologies like HTML, JavaScript, and Tailwind CSS to build responsive user interfaces for automation projects.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am interested in Smarte Prozesse GmbH’s work in process automation and digital workflow optimization. I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to your team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
