I am writing to apply for the Senior Softwareentwickler Testsysteme position for Funkkommunikationssysteme at citema systems GmbH. Your focus on cyber security, AI, and blockchain combined with system-relevant software projects aligns closely with my engineering background and interests.

My technical experience spans test automation, CI/CD pipeline design, and API development. I have built and deployed automated testing infrastructure using Docker and Linux servers, and I have designed REST APIs and real-time communication protocols. These skills directly support the development of test pipelines, test interfaces, and automated verification systems required for complex communication platforms.

A relevant example is a real-time server health monitoring system I developed. It used Node.js, Socket.IO, and Docker to stream live system metrics, automate data collection, and visualize test results. This project required building a scalable architecture with role-based access control, scheduling automated checks, and ensuring reliable data delivery under continuous operation. The experience maps well to building end-to-end test systems, integrating test servers, and automating measurement and visualization workflows.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to citema’s test systems development.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
