I am writing to apply for the Junior Produktentwickler - Home & Personal Care position at everdrop GmbH. Your mission to reduce single-use plastic and make sustainable household products accessible is genuinely inspiring, and I would welcome the opportunity to contribute to a company that combines environmental impact with practical product innovation.

Although my professional background is in software engineering rather than chemical formulation, I bring transferable strengths that align well with this role. Through my work as a Web Developer, I have developed a rigorous approach to systematic testing, documentation, and iterative optimization. I am comfortable taking ownership of projects, working independently, and maintaining precise records of my work. These habits translate naturally into a laboratory environment where reproducibility and attention to detail are essential.

One area that particularly interests me is the structured nature of product development. In software, I learned that small changes can have unexpected effects, and thorough testing is the only way to ensure reliability. I apply the same mindset to any technical challenge: I plan carefully, document thoroughly, and validate results before moving forward. I am confident I can bring this disciplined approach to developing and optimizing cleaning and personal care formulations.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am eager to bring my analytical mindset, structured working style, and commitment to sustainability to everdrop. I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your R&D team.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
