I am writing to apply for the Systemadministrator/in Team Technischer Anwendungsbetrieb position at Lecos GmbH. Your work in modernizing municipal administration through IT consulting and service delivery is a field where I see a strong alignment with my own technical background and interests.

Through my professional experience as a Web Developer, I have built a solid foundation in system administration and application operations. I have worked extensively with Linux servers, configuring and maintaining Nginx and Apache for production web applications. I have also managed Docker containers for application deployment and used CI/CD pipelines to streamline updates and patches. This hands-on experience with server environments, application configuration, and troubleshooting maps directly to the responsibilities of planning, building, and maintaining IT and application systems.

A significant part of my work has involved database administration. I have worked with MySQL and PostgreSQL in production settings, handling schema design, query optimization, backups, and performance monitoring. I am comfortable administering database systems, planning updates and upgrades, and troubleshooting issues in the database and application layer. I also have experience with Redis for caching and monitoring tools like Prometheus and Grafana, which support proactive system oversight.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my system administration and application operations experience can contribute to the Lecos team.

Sincerely,

Md Shahanur Islam Shagor
