I am writing to apply for the Working Student IT System Administrator position at PlantaCorp GmbH. PlantaCorp's work in producing high-quality liposomal supplements with ISO 22000 and GMP certification is impressive, and I am interested in contributing to your IT operations while completing my studies in Software Engineering.

Through my professional experience and hands-on project work, I have developed practical skills in Linux server administration, system monitoring, and infrastructure maintenance. I am comfortable working with Nginx, Apache, Docker, and CI/CD pipelines, and I have experience deploying and maintaining applications on cloud platforms including AWS and Google Cloud. These skills align well with supporting your on-premise server infrastructure and cloud services.

In previous roles, I have been responsible for setting up workstations, managing backups, monitoring system health, and assisting with IT security tasks. I have worked with Linux environments extensively and have basic scripting knowledge that supports automation and system configuration. I am comfortable documenting IT processes and configurations clearly.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am currently enrolled in a Software Engineering program and am looking for a part-time opportunity where I can apply my infrastructure knowledge while continuing to learn. I have attached my CV for your review and welcome the opportunity to discuss how I can support the IT team at PlantaCorp.

Sincerely,

Md Shahanur Islam Shagor
