I am writing to apply for the Systemingenieur (m/w/d) Aktive Sensoren position at Proway GmbH. Your company's long-standing experience in IT projects and software development across aerospace, defence, and automotive sectors aligns with my background in building intelligent systems that combine hardware, software, and real-world testing.

Through research and development work, I have gained practical experience in systems engineering for autonomous platforms. My work on the Wireless Vision-Aid for the Blind (WVAB) involved designing a complete system architecture that integrated YOLOv8n-based object detection, ultra-low latency UDP streaming, and multilingual audio feedback on embedded hardware. This required defining subsystem interfaces, managing real-time data flow, and conducting field tests to validate performance under varying conditions.

One area that particularly interests me is the integration and qualification of active sensor systems. In my WVAB project, I was responsible for sensor selection, signal processing pipeline design, and end-to-end testing on both subsystem and system levels. I also documented the development process, test results, and validation procedures thoroughly. This experience maps directly to the responsibilities of system conception, architecture design, qualification planning, and documentation outlined in your job description.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my systems engineering background can contribute to your team at Proway GmbH.

Sincerely,

Md Shahanur Islam Shagor
