I am writing to apply for the Administrator 19966 position at Somewhere. The fully remote nature of this role aligns well with my work style, and I am confident in my ability to contribute to your team's operational needs.

My background includes hands-on experience with Linux server administration, Docker containerization, and web server configuration using Nginx and Apache. I have set up and maintained CI/CD pipelines, deployed applications on AWS and Google Cloud, and managed monitoring tools like Prometheus and Grafana. These skills allow me to handle server infrastructure, deployment workflows, and system reliability tasks effectively.

In my professional experience as a Web Developer, I was responsible for deploying and maintaining applications on Linux servers, configuring Nginx and Apache, managing Docker environments, and ensuring smooth CI/CD operations. I also worked with cloud platforms including AWS and Google Cloud for hosting, storage, and scaling. This practical experience has given me a solid understanding of production system administration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in system administration and remote work can support Somewhere's operations.

Sincerely,

Md Shahanur Islam Shagor
