I am writing to express my interest in joining SYOS Aerospace as your team scales across robotics, aerospace, and autonomous vehicle technologies. Your focus on building groundbreaking systems across air, land, and sea domains aligns directly with the work I have been pursuing in autonomous systems and secure UAV communication.

Through research and development work, I have built practical experience with autonomous systems, computer vision, and decentralized coordination. I developed a Wireless Vision-Aid for the Blind (WVAB) using YOLOv8n-based object detection on a Raspberry Pi with ESP32-CAM, achieving real-time offline inference with ultra-low latency UDP streaming. This project required integrating edge computing, sensor fusion, and multilingual audio feedback into a single reliable system.

I also designed OmniGuard V2X, a privacy-preserving blockchain framework for autonomous vehicle networks. This system uses Zero-Knowledge Proofs and post-quantum cryptography to secure Vehicle-to-Everything (V2X) communication, ensuring data integrity and resilience against cyber threats. The work involved C++, Python, NVIDIA Jetson Nano, and cryptographic protocol design.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to stay on your radar as SYOS continues to grow. I am ready to contribute to the future of autonomy.
