I am writing to apply for the Founding Designer role at Leap. Your mission to bring clarity and fairness to specialty pharmacy benefits is genuinely important, and I appreciate the focus on designing experiences that help patients navigate complex, high-stakes healthcare decisions.

My background is in full-stack development and front-end engineering, with hands-on experience building responsive, user-friendly interfaces using React, Next.js, TypeScript, Tailwind CSS, and Figma. I have designed and implemented complete web applications where clean UI, clear information hierarchy, and smooth user flows were central to the product. I am comfortable working from wireframes to production code, and I understand how design decisions directly impact user trust and conversion.

One area that particularly interests me is building systems that scale. In my project work, I have created reusable component libraries, modular page architectures, and design patterns that allowed teams to maintain consistency across multiple features without duplicating effort. I also have experience with AI-assisted workflows and production tooling, which aligns with Leap's interest in modern, efficient creative processes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my design and development experience can contribute to Leap's patient-facing experience.

Sincerely,

Md Shahanur Islam Shagor
