I am writing to apply for the Senior Technical Consultant MarTech & CRM position at Ilias Vassiliou & Team / headhunter.digital. The role combines technical consulting, digital transformation, and project steering, which aligns well with my background in full-stack development and technology advisory.

What stands out to me is the focus on translating business requirements into technical concepts and guiding clients through complex digital decisions. In my professional experience as a Web Developer, I have worked directly with stakeholders to understand their goals, evaluate technology options, and deliver scalable platforms. I am comfortable bridging the gap between business needs and technical implementation.

Through my work with Laravel and Next.js, I have built RESTful APIs, implemented authentication and role-based access control, and integrated payment gateways and third-party services. I have also deployed applications on Linux servers using Docker, Nginx, and CI/CD pipelines. These skills are directly relevant to evaluating and architecting MarTech and CRM system landscapes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your clients' digital transformation projects.

Sincerely,

Md Shahanur Islam Shagor
