I am writing to apply for the Video Editor / AI Creative Cutter position at everydays. Your approach to scaling performance marketing through AI-driven creative iteration is exactly the kind of challenge I want to be part of.

Through hands-on project development, I have built AI-powered systems that combine computer vision, real-time data processing, and automation. One example is the Wireless Vision-Aid for the Blind (WVAB), where I designed a complete pipeline using YOLOv8n for object detection, optimized for low-latency inference on edge hardware. This required working with generative and AI-based tools to process visual data and produce meaningful output in real time. I approach AI as a practical multiplier for speed and quality, not just a theoretical concept.

In previous work, I have integrated APIs, automated workflows, and built systems that prioritize iteration speed and data-driven optimization. I am comfortable working with Python, Docker, and Linux-based environments, and I enjoy building tools that help teams move faster. The idea of using AI to generate hook variants, voiceovers, and synthetic UGC at scale aligns directly with how I think about creative technology.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to your creative workflow.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
