I am writing to apply for the Data & AI Engineer role at Team Passerelle. Your mission to build a bridge between technological progress and better working conditions, grounded in European democratic values, is exactly the kind of environment where I want to contribute my skills.

Through research and development work, I have built AI-powered systems that process unstructured data and deliver real-time insights. One project involved developing an AI-powered financial application where I used OpenAI's API for assistant training, AWS Transcribe for voice-to-text conversion, and AWS SES for automated document delivery. This required designing data ingestion pipelines, managing metadata, and ensuring secure handling of sensitive information.

A relevant example is the Wireless Vision-Aid for the Blind system I developed, which uses YOLOv8n for real-time object detection on edge devices. This project required building a complete pipeline for processing video streams, generating structured metadata, and delivering audio feedback with low latency. I worked with Python, C++, and embedded hardware, and designed the system to operate fully offline with a focus on data efficiency and privacy.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI engineering and data pipelines can support Team Passerelle's mission.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
