I am writing to apply for the AI Solutions Architect role at Team Passerelle. Your mission to build a bridge between technological progress and better working conditions, grounded in digital sovereignty and ethical AI, is exactly the kind of challenge I want to contribute to.

Through research and development work, I have built production-ready AI systems that combine software engineering with practical machine learning. One area that particularly interests me is designing scalable architectures for AI applications. I have hands-on experience integrating OpenAI APIs, building RAG-style assistants, and deploying real-time systems on AWS infrastructure. I am comfortable working across the full stack, from backend logic to cloud deployment.

A relevant example is an AI-powered financial platform I developed, which uses OpenAI assistants, AWS Transcribe for voice processing, and automated PDF generation via AWS SES. The system handles authentication, role-based access, and real-time data pipelines. This project required the same kind of end-to-end thinking your role demands: translating complex requirements into working prototypes, evaluating technology trade-offs, and delivering a reliable product.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Team Passerelle’s mission of building good AI for good work.

Sincerely,

Md Shahanur Islam Shagor
