I am writing to apply for the Digital Workplace Manager position at TEQWERK GmbH. The focus on designing practical, user-centered digital work environments that combine collaboration tools, workflow automation, and cloud integration aligns directly with the kind of work I enjoy and have experience delivering.

Through my professional experience as a Web Developer, I have designed and implemented scalable web applications using Laravel, Next.js, and cloud platforms such as AWS and Google Cloud. I have built RESTful APIs, integrated authentication and role-based access control, and deployed applications on Linux servers with Docker and Nginx. These projects required translating complex technical requirements into solutions that both technical teams and end users could work with effectively.

One area that particularly interests me is workflow automation and the integration of modern collaboration tools. In previous projects, I have implemented real-time features using WebSockets and Socket.IO, automated backend processes with cron jobs, and built systems that streamline communication between different user roles. I also have experience with AI and automation technologies, which I believe can bring additional value to digital workplace environments.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to TEQWERK’s digital workplace solutions.

Sincerely,

Md Shahanur Islam Shagor
