I am writing to apply for the Windows Server Administrator / Messaging Engineer position at ITconfig/all GmbH. The role's focus on managing server environments, web servers, and database connectivity aligns with my technical foundation in Linux systems administration and web infrastructure.

Through my professional experience, I have worked extensively with Linux-based server environments, managing deployments on Nginx and Apache web servers. I have configured and maintained Docker containers, set up CI/CD pipelines, and handled database connectivity with MySQL and PostgreSQL. These responsibilities have given me practical experience in server administration, troubleshooting, and maintaining reliable production systems.

One area that particularly interests me is the administration of web servers and database connections mentioned in the job description. In my previous work, I managed web server configurations, optimized database queries, and ensured stable connectivity between application layers. I am comfortable with incident analysis and operational support workflows that keep systems running smoothly.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
