I am writing to apply for the Founder's Associate (Pflichtpraktikum) position at Heidi Systems GmbH. What Heidi is building â digitizing the analog blind spots in real estate through IoT hardware, software, and operational excellence â is exactly the kind of problem I want to work on. The combination of PropTech, ClimateTech, and real operational impact makes this role stand out.

As a Software Engineering student with hands-on experience in full-stack development, AI automation, and system architecture, I am used to taking ownership of complex projects from concept to delivery. I have built production applications using Laravel, Next.js, Node.js, and React, and I am comfortable working across the stack â from database design and API development to responsive UI and deployment on Linux servers with Docker and Nginx.

One area that particularly interests me is the emphasis on AI automation and internal tooling mentioned in the role. In previous work, I developed an AI-powered real estate platform that integrated role-based authentication, subscription plans, Stripe payments, and AI assistants trained on custom datasets. I also built a real-time server health monitoring dashboard using Socket.IO and Docker. These projects required me to translate unclear requirements into working systems, manage multiple moving parts, and deliver results independently.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am looking for a role where I can take real responsibility from day one, learn fast, and contribute meaningfully to a growing company. I have attached my CV for your review and would welcome the opportunity to speak with you about how I can support Heidi's growth.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
