I am writing to apply for the Textile Certification Manager position at circular.fashion. Your work on circular design software, closed-loop recycling, and setting standards in the textile industry is genuinely impactful. I want to contribute to a team that guides and verifies circular products at scale.

Although my professional background is in software engineering rather than textiles, I have spent years building systems that demand rigorous documentation, quality management, and structured process implementation. In my work developing full-stack applications, I designed authentication flows, payment integrations, and role-based access systems that required clear, repeatable documentation and stakeholder coordination across teams. These skills translate directly to setting up certification processes, managing stakeholders, and maintaining structured documentation.

One area that particularly interests me is the knowledge-building and knowledge-sharing aspect of this role. In previous work, I collaborated with cross-functional teams, documented system architectures, and contributed to team knowledge-sharing sessions. I am comfortable translating complex information into clear, actionable documentation that different stakeholders can use.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I am committed to supporting circular.fashion’s mission and would welcome the opportunity to discuss how my background in structured process implementation and quality management can contribute to your certification work. I have attached my CV for your review.

Sincerely,

Md Shahanur Islam Shagor
