I am writing to apply for the AI Agent Engineer position at TEQWERK GmbH. What stands out to me about your approach is the focus on building AI systems that are actually used, not just experimented with. That matches how I work: I prefer building practical tools that solve real problems over chasing technology trends.

Through hands-on project development, I have built AI agents and automation systems that integrate LLMs, APIs, and real-world business logic. I developed an AI-powered financial application where I built backend APIs using Express, TypeScript, and OpenAI, trained custom AI assistants on proprietary datasets, and implemented voice-to-text processing via AWS Transcribe. The system generates PDF term sheets from Google Sheets data and sends them automatically through AWS SES. This project required connecting multiple AI services into a single, reliable workflow.

I also built an AI-powered real estate platform that combines OpenAI assistants with Replicate API for image processing. The system supports role-based authentication, subscription plans, Stripe payment integration, and cron job scheduling for automated tasks. These projects have given me practical experience with the full cycle of AI agent development: prototyping, API integration, testing, and production deployment.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how my background in AI engineering and automation could contribute to TEQWERK’s projects.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
