I am writing to apply for the DevOps Engineer (Part-Time, Remote) position at Louco Event Media GmbH. Your AI-powered event discovery platform is an interesting concept, and I appreciate the focus on building infrastructure that supports growth and reliability. I would like to contribute to your team's infrastructure, deployments, and scalability efforts.

My background is in full-stack development and infrastructure engineering, with hands-on experience managing Linux servers, Docker containers, and CI/CD pipelines. I have worked with PostgreSQL, Nginx, and cloud platforms such as AWS and Google Cloud. I am comfortable configuring domains, SSL certificates, and networking, and I follow security best practices in every deployment.

In previous work, I deployed and maintained applications on Linux servers using Docker and Nginx, and I built CI/CD pipelines to streamline releases. I have also set up monitoring and logging to track uptime and performance. These experiences directly align with managing development, staging, and production environments, as well as improving scalability and reliability.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I am available for approximately 30â 40 hours per month and can start immediately. I look forward to the possibility of working with Louco and supporting your infrastructure as you prepare for your next growth phase.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
