I am writing to apply for the Test posting position at Vortex Companies - Trenchless Infrastructure Rehabilitation Solutions. Your work in trenchless infrastructure and water rehabilitation addresses critical challenges in aging utility systems, and I am interested in contributing to your team.

My background is in full-stack and backend development. I have built scalable web applications using Laravel, Next.js, React, Node.js, and TypeScript. I have worked with MySQL, PostgreSQL, and MongoDB, and I have experience designing RESTful APIs, implementing authentication and role-based access control, and integrating payment gateways.

In previous professional roles, I developed and maintained production web applications. I worked on real-time features using WebSockets, optimized database queries for performance, and deployed applications on Linux servers with Nginx and Docker. I also built responsive, SEO-friendly interfaces using Tailwind CSS and modern JavaScript frameworks.

One project that reflects my approach is a multi-vendor e-commerce ecosystem built with Laravel and Flutter. It involved role-based access control, real-time notifications, Redis caching, and a modular backend architecture designed for scalability across web and mobile platforms.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how I can contribute to Vortex Companies.

Thank you for your time and consideration.

Sincerely,

Md Shahanur Islam Shagor
