I am writing to apply for the Lead Software Engineer Ads role at Jane Technologies. Your platform's mission to bring confidence to the online cannabis shopping experience through a tightly integrated ecosystem is compelling, and I am interested in contributing to the engineering behind your digital merchandising platform.

My technical background is rooted in building scalable backend services and APIs. I have professional experience with Go, Node.js, and Laravel, and I have worked extensively with relational databases such as MySQL and PostgreSQL. I am comfortable with distributed systems, real-time communication via WebSockets, and containerized deployments using Docker and Nginx on Linux servers.

One area that particularly interests me is the intersection of backend engineering and data-driven product decisions. In previous work, I have built APIs that support real-time features, role-based access control, and third-party integrations. I have also worked with cloud infrastructure on AWS, including deployment and basic monitoring. I am comfortable navigating ambiguous technical challenges and collaborating with cross-functional teams to align engineering work with product goals.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience aligns with the needs of your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
