I am writing to apply for the Inventory Planner position at Grove Collaborative. Your mission to transform the CPG industry through sustainability and intelligent operations resonates with me, and I am particularly drawn to the emphasis on AI-powered planning tools and data-driven decision making.

My professional experience centers on building scalable systems that combine automation with analytical depth. I have developed full-stack applications using Laravel, Next.js, and Node.js, and have integrated AI capabilities into real-world platforms. For example, I built an AI-powered financial application that uses OpenAI for intelligent assistance, AWS for cloud infrastructure, and automated data processing pipelines. This work required translating complex requirements into actionable technical solutions, similar to how an Inventory Planner translates sales forecasts into replenishment decisions.

One area that particularly interests me is the role's focus on continuous improvement through AI and automation. In my projects, I have implemented real-time monitoring dashboards using Socket.IO and built systems that proactively detect anomalies and trigger automated responses. I approach automation not as a supplement but as a primary driver of efficiency, which aligns with your expectation for someone who leads with new technologies.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in AI-driven systems and scalable platform development can contribute to Grove Collaborative's inventory planning operations.

Sincerely,

Md Shahanur Islam Shagor
