I am writing to apply for the Director of Commercial Operations role at Curaleaf International. This position stands out because it combines strategic process building with hands-on execution, exactly the kind of challenge I am looking for.

My professional background is in software engineering and systems design, where I have spent years building scalable infrastructure from the ground up. I approach problems by first understanding the full picture, then designing frameworks that bring clarity and consistency to complex operations. This builder's mindset aligns directly with what you need: someone who can create commercial governance and demand planning processes where none existed before.

In previous work, I designed and implemented role-based access control systems, real-time monitoring dashboards, and multi-tenant platforms that required clear process definition across different user groups. These projects taught me how to establish standards, create visibility into performance, and ensure that different teams work against the same reliable data. I am comfortable building SKU-level models, defining what good looks like for each market, and creating the tools that give leadership a consolidated forward view.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my experience in building scalable systems and processes can contribute to Curaleaf International's commercial transformation.

Sincerely,

Md Shahanur Islam Shagor
