I am writing to apply for the Junior Data Analyst / Data Scientist position at AWISEE. This role interests me because it combines data analysis with practical machine learning, which aligns with my hands-on experience in building intelligent systems.

Through research and project development, I have worked extensively with Python for data processing, automation, and AI model integration. One relevant example is the Wireless Vision-Aid for the Blind (WVAB) system, where I implemented a YOLOv8n-based object detection pipeline that runs entirely offline. This required working with the COCO dataset, optimizing inference speed, and integrating real-time data streaming with low-latency communication protocols.

In addition to AI and data work, I have professional experience developing full-stack web applications using Laravel, Next.js, and Node.js. This has given me a strong foundation in building scalable APIs, managing databases, and deploying production systems. I approach problems systematically and focus on delivering reliable, well-tested solutions.

I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the team at AWISEE.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
