I am writing to apply for the Product Designer Design Systems role at Penn Interactive. Your focus on scaling and maintaining the Alley-oop design system to help feature designers and developers work more efficiently aligns directly with the kind of work I enjoy and do well.

While my primary background is in full-stack development, I have consistently worked at the intersection of design and engineering. I use Figma regularly to design UI components, wireframes, and prototypes before translating them into production code. This dual perspective allows me to build design systems that are not only visually consistent but also practical for developers to implement and maintain.

One area that particularly interests me is creating reusable, scalable component libraries. In previous projects, I have built frontend interfaces using React, Next.js, and Tailwind CSS, where I focused on establishing consistent patterns for typography, spacing, color, and interactive states. I understand that a good design system reduces friction between designers and developers, and I am comfortable working on both sides of that collaboration.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review. I would welcome the opportunity to discuss how I can contribute to scaling Alley-oop and supporting the product team at Penn Interactive.

Sincerely,

Md Shahanur Islam Shagor
