I am writing to apply for the Kubernetes Platform Engineer position at interface projects GmbH. Your work on INTERGATOR, a semantic enterprise search platform used across industry and government, is impressive. I am particularly interested in the opportunity to take operational and strategic ownership of Kubernetes environments as they become the central technical foundation for development, testing, and production.

My background includes practical experience with container technologies and infrastructure tooling that directly aligns with this role. I have worked with Docker for containerization, Linux for server administration, and CI/CD pipelines for automating deployments. I also have experience with monitoring and observability stacks using Prometheus and Grafana, which I have used to track system health and performance in real time.

One area that particularly interests me is the responsibility for building, operating, and advancing Kubernetes clusters. In a recent project, I built a full-stack real-time server health monitoring dashboard that tracked availability and latency of multiple target URLs. The system used Socket.IO to stream live metrics to the browser, and the entire stack was containerized with Docker and Docker Compose for production deployment. This experience gave me practical insight into maintaining stable, observable infrastructure and standardizing deployment processes.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my skills can contribute to the continued success of your platform infrastructure.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
