I am writing to apply for the Inhouse Netzwerk Security Engineer position at Polarstern Experts. Your focus on modern, secure, and scalable IT infrastructures with an emphasis on firewalls, cloud, and Infrastructure as Code aligns directly with areas I have been actively developing.

Through hands-on project work, I have built and managed cloud-based systems using AWS, Docker, and Linux. I have configured Nginx and Apache servers, set up CI/CD pipelines, and worked with monitoring tools like Prometheus and Grafana. These experiences have given me a solid foundation in managing secure, high-availability network environments.

One area that particularly interests me is Infrastructure as Code. I have used Git extensively for version control and have worked with containerized deployments using Docker and Docker Compose. While my direct experience is with cloud infrastructure and server automation rather than dedicated firewall platforms, I am confident in my ability to quickly adapt to Fortinet and Palo Alto environments given my strong systems engineering background.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background can contribute to your team.

Best regards, Md Shahanur Islam Shagor

Sincerely,

Md Shahanur Islam Shagor
