I am writing to apply for the IT Projektleiter / Business Analyst Produktionssoftware position at JˆRGEN TAUSCH Recruitment und Coaching. The role of bridging production, IT, and software development aligns directly with the kind of cross-functional work I have been doing throughout my career.

In my professional experience as a Full-Stack & AI Engineer, I have regularly acted as the interface between business stakeholders and development teams. I have gathered requirements from production and logistics departments, structured them into actionable user stories, and worked alongside developers to ensure the final software met real-world operational needs. This has given me a practical understanding of how to translate complex business processes into clear technical tasks.

A relevant example is my work on the Multivendor E-commerce Management Ecosystem, where I coordinated requirements across customers, sellers, delivery agents, and logistics teams. I managed the product backlog, prioritized features based on business impact, and facilitated sprint planning and review sessions. This experience taught me how to balance competing priorities while keeping the development team focused on delivering value.

In addition to my technical experience, I work effectively across multidisciplinary teams and communicate clearly with both technical and non-technical stakeholders. I am fluent in Bengali and English, have working knowledge of Russian and Hindi, and enjoy collaborating in international and cross-cultural environments.

I have attached my CV for your review and would welcome the opportunity to discuss how my background in requirements analysis and agile project coordination can contribute to your client’s production software team.

Sincerely,

Md Shahanur Islam Shagor
Full-Stack Developer & AI Engineer
